COLONEL C. L. PAGANO
Superintendent

Dear Reader:

In 1982 the State of New Jersey showed a reduction of 8.7% in fatalities as compared to 1981. We believe one of the major factors attributed to this reduction was the implementation of several alcohol awareness programs instituted throughout the state by both state and local law enforcement agencies.

The statistics for 1982 indicate a death rate of 2.2 for every 100 million miles traveled.

This data report indicates a very thorough review of the causation factors and results of all the fatal accidents throughout the state in 1982. It is hoped that this publication will aid all law enforcement agencies in their continuing desire for safety on our highways.

On the following pages you will find statistics of the fatal traffic accident records compiled by the Fatal Accident Unit of the Division of State Police for 1982.

Sincerely,

Clinton L. Pagano

M. ALCOHOL FACTOR

There were 1061 Fatalities during 1982. Of this total, 797 were tested for alcohol and 264 were not tested. The various reasons for those not tested were: delayed deaths; age factors; contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause tests to be performed on victims. Of the Fatalities, 524 were drivers; 244 passengers; 276 pedestrians and 17 pedalcyclists. Of the 797 tested, 441 were positive for alcohol in varying degrees and 354 were negative. This would indicate 55.4% of the fatalities tested were positive for alcohol and 44.6% were negative.

The attached chart is a breakdown of victims and the percentage of alcohol in each classification. An analysis of the chart by victim classification indicates the following:

1. **Drivers:**
   There was a total of 524 drivers killed, of which 453 were tested. Of those tested 270 were positive and 183 negative, for a 59.6% alcohol factor. The .10% and over alcohol level, has the largest number listed. Of the 270 imbibing drivers, 192 or 71.1% had an alcohol level of .10% or higher.

2. **Passengers:**
   There was a total of 244 passengers killed, of which 138 were tested. Of those tested, 74 were positive and 64 were negative for a 53.6% positive alcohol factor.

3. **Pedestrians:**
   There was a total of 276 pedestrians killed, of which 196 were tested. Of those tested, 93 were positive and 103 negative for a 47.4% alcohol factor.

4. **Pedalcyclists:**
   There was a total of 17 pedalcyclists killed. Eight pedalcyclists were tested for alcohol content. Of those tested, 4 were positive and 4 negative for a 50.0% alcohol factor.

SPECIFIC AREAS OF CONCERN

INTERSTATE HIGHWAY FATALITIES

The Interstate Highway System of New Jersey is approximately 85.74% completed. Of the 399.20 miles of roadway which are projected for this system, 342.26 miles have been opened to the motoring public. With this number of roadway miles open through a variety of areas such as rural, urban, flat, hilly, etc., an equal variety of accidents have become prevalent. Beyond the smaller "damage to property" type of accidents we are now encountering the non-repairable . . . the human fatality. Thirty-three percent of the thirty-nine (39) fatal accidents which occurred during 1982 involved pedestrians. Twenty-seven percent of the accidents had alcoholic beverages contribute heavily towards causing the accidents. Over the twelve month span, the death rate averaged 3.6 deaths per month, and one death for every 7.7 miles of roadway. In order to have a clear, concise picture of the type and age of victim, as well as the manner and contributing factors of these fatal motor vehicle accidents, the following facts are outlined for you.

* One Driver Under Influence of Drugs

NEW JERSEY STATE POLICE — AGE OF MAJORITY

The enactment of Senate Bill S-992, that became effective on January 1, 1973, added over one-half million potential drinking drivers to our highways. Accident statistics are available for this age group (18 - 19 - 20); however, alcohol involvement relative to accidents is available only in accidents where fatalities occur.

Listed below are statistics indicating the involvement of **drivers** in accidents in the **18 to 20 year-old age group**. The year 1972 is used as a base, being the year prior to the Age of Majority.

Years	Total Accidents	Total Injury Accidents	Total Fatal Accidents 18 - 20 Drivers	Total Drivers Involved	Number of Drivers Drunk or Impaired	Percent of 18-20 Drivers Drunk or Impaired

On January 2, 1980, Senate Bill S-1126 was signed into law as Chapter 260, Laws of 1979, which extends to persons 19 years of age and older the right to sell, purchase and consume alcoholic beverages. The figures below reflect those drivers in the 19-20 year-old age group.

The figures below reflect the drivers in the 18 year old age group.
